

Portfolio Risk Report

Portfolio value: EUR 10,000,000.00 | Confidence: 97%
Risk horizon: 1 trading day | Monte Carlo scenarios: 100,000
Historical return observations: 204 | Fitted Student-t degrees of freedom: 161.94

Risk estimates

Method	Scenario	VaR EUR	VaR %	ES EUR	ES %
Historical	Baseline	142,464.10	1.42%	169,813.87	1.70%
Monte Carlo	Baseline	158,416.55	1.58%	190,217.42	1.90%
Historical	Stress x3	427,392.29	4.27%	509,441.61	5.09%
Monte Carlo	Stress x3	475,249.65	4.75%	570,652.27	5.71%

01 / Portfolio allocation

02 / Baseline and stress comparison

VaR is a loss threshold, not a maximum possible loss.
ES is the average scenario loss at or above VaR.

Stress rule: multiply all losses and gains by 3.
VaR and ES therefore triple exactly. This is a sensitivity analysis, not a historical crisis replay.

Loss distributions

One-day losses in EUR. Negative losses represent gains.

03 / Historical vs. Monte Carlo

04 / Monte Carlo: baseline vs. stress

05 / Historical: baseline vs. stress

Dashed lines mark VaR. Histograms use common bins within each chart. The x-axis is cropped to the 0.1% to 99.9% range of the plotted data. Input returns must use matching dates and a consistent EUR perspective. Constant daily weights imply daily rebalancing. Student-t simple returns and scaled losses can imply losses above the value of an unleveraged portfolio. Parameter uncertainty and liquidity risk are not modelled.

Backtest

Rolling test of the historical VaR against the losses that actually occurred.

Metric	Value
Method	Historical VaR, rolling window of 102 days
Confidence level	97.0%
Backtest observations	102
VaR exceedances (observed)	3
VaR exceedances (expected)	3.1
Exceedance rate (observed / expected)	2.94% / 3.00%
Kupiec LR statistic	0.001
Kupiec p-value	0.972
Result	Model not rejected at the 5% level

A VaR exceedance occurs when the actual loss is greater than the estimated VaR.
The Kupiec test checks whether the observed exceedance rate matches the expected rate.
A p-value below 0.05 indicates that the model is rejected.
